Equitable Education for Marginalized Youth in Latin America and the Caribbean

This edited volume examines the thrust toward equity in education for marginalized and out-of-school youth, as well as youth with disabilities, in countries located in the Global South. Using a critical cross-cultural lens to interrogate the historical, empirical, and theoretical discourses associated with achieving UNESCO's equity in education agenda, the book showcases the work of scholars from developed and developing nations in examining inclusive education. Drawing attention to the nature, impact, and effects of marginalization, the book ultimately demonstrates the ability of education systems in the Global South to be innovative and agile despite current resource challenges. This text will benefit scholars, academics, and students in the fields of international and comparative education, education policy, and inclusion and special educational needs education more broadly. Those involved with Caribbean and Latin American studies, the sociology of education, and diaspora studies in general will also benefit from this volume.

Electronic Document Preparation and Management for CSEC

This book presents current perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools. It contains chapters contributing to three main areas. A first set of chapters examines mathematical, epistemological, and curricular perspectives. A second set of chapters presents studies on geometry instruction and teacher knowledge, and a third set of chapters offers studies on geometry thinking and learning. Specific research topics addressed also include teaching practice, learning trajectories, learning difficulties, technological resources, instructional design, assessments, textbook analyses, and teacher education in geometry. Geometry remains an essential and critical topic in school mathematics. As they learn geometry, students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world. Geometry has traditionally been included as a subject of study in secondary mathematics curricula, but it has also featured as a resource in out-of-school problem solving, and has been connected to various human activities such as sports, games, and artwork. Furthermore, geometry often plays a role in teacher preparation, undergraduate mathematics, and at the workplace. New technologies, including dynamic geometry software, computer-assisted design software, and geometric positioning systems, have provided more resources for teachers to design environments and tasks in which students can learn and use geometry. In this context, research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators, as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers' decision making.
